

Chih-Yu Lee

**Describe your experience with this assignment, specifically:**

- **What challenges did you encounter with this assignment, if any?**

NA

- **What did you think about the requirements specification for this assignment?**

I think the requirements is clear and fair as a first assignment! But still looking forward to learn more skills and different usage of the testing framework! If the skill is currently been used in industry that would be wonderful!!

- **What challenges did you encounter with the tools?**

Not much challenges, I have used it before.

- **Describe the criteria you used to determine that you had sufficient test cases, i.e. how did you know you were done?**

I separate my testing in two parts. First, make sure the input can only be numbers(integer and float). Second, testing each triangle case has been test successfully! then testing minimum input and “not a triangle inputs”
